

With Vanceva™ you can choose from an extensive palette of colors to fulfill your design vision. Vanceva is a laminated glass product that can be used in both interior and exterior applications. This allows you to offer the design option that you want with the superior performance attributes your project demands.

Building on the base benefits of standard laminated glass – solar protection, sound reduction, and enhanced safety and security – Vanceva interlayers provide advanced solutions for multiple architectural challenges.

The Vanceva palette consists of 11 colors and 3 different opacities of white. By combining up to 4 colored or white interlayers in a single piece of laminated glass, you can create over 20,000 different colors. These colors can be transparent or translucent.

Imagine some of these possibilities

- Combine Vanceva Colors with many of our textured glass products
- Combine colors with mirror
- Combine colors with both mirror and textured glass
- Combine colors with our Sumiglass® Metallic Film interlayers
- We also welcome other suggestions that you may have to fulfill your design vision
- Combine colors with anti-reflective glass
- Combine color with almost any architectural performance enhancing glass
